Prairie Tech Oilfield Services:
Case Study

Needs

- Engage drivers in safety program
- Comply with H&S Regulations
- Improve productivity

Solution

Ok Alone - Lone Worker Safety Monitoring System

How Prairie Tech Oilfield Services engaged its drivers with Ok Alone

The Challenge

Prairie Tech Oilfield Services, an oilfield fluid hauling company, has approximately 100 drivers and field operators. The fleet drivers had concerns—like what to do if a vehicle incident or sudden health issue were to occur while working alone—that they were unsure how to address.

Kaitlin Orr, Safety Coordinator at Prairie Tech, was keen to improve the situation and ensure drivers felt comfortable and safe while on the job. She wanted to comply with lone worker Health and Safety Regulations, and recognized that neglecting them posed a significant risk to the business. Kaitlin was interested in finding a safety system that would engage drivers while ensuring Prairie Tech remained productive.

The Solution

After testing several other systems, Prairie Tech tried Ok Alone. Their 7 day free trial was successful and positively received by drivers. In particular, they liked how easy it was to use.

The app was quick to install on driver's cell phones and didn't require a lengthy instruction manual to understand. With the simple check-in reminders, the app served its purpose without interrupting the daily routine.

Kaitlin thought the app was flexible and accommodating to

different employees, and liked how it simplified her day. All she had to do was log in to the Ok Alone dashboard where she could assess at a glance if drivers had checked-in or needed help. This simple tool ensured she could stay on top of any situation, and gave her more time to focus on other work responsibilities.

Additionally, the Ok Alone reports proved to be useful coaching tools among drivers. They could visually see how their performance compared with other drivers and could make the appropriate adjustments to improve.

The Results

- 1) Use of a check-in system went from less than 10% to over 95% using Ok Alone
- 2) Drivers felt an increased morale and sense of safety when working alone.
- 3) Work Alone Health and Safety Regulations met

Next Steps
